## **DETAILED ACTION**

## Response to Arguments

1. Applicant's arguments with respect to claims 85-88 and 91 have been considered but are most in view of the new ground(s) of rejection.

## Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

4. Claims 85-88 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ahr USPN 5763044.

As to claims 85-88 Ahr discloses an absorbent web capable of being used as a pad and having a dry feel when wet (Abstract) comprising a cellulosic basesheet (col. 6, lines 40-45) having an upper surface and a lower surface, the upper surface having elevated and depressed regions (Figure 7). The web further comprises hydrophobic matter (col. 5, lines 63-65) preferentially on the elevated regions of the upper surface of the base sheet (Figure 7).

With respect to the dimensions of the web, the specification contains no disclosure of either the critical nature of the claim limitations nor any unexpected results arising therefrom. Ahr teaches hydrophobic fibrils on the topsheet for the same purpose, to improve the surface wetness characteristics of the topsheet by separating the wearer's body from any bodily fluids that may remain on the body side surface of the topsheet, thus providing the body surface with a pleasant tactile feel, therefore to provide the article of Ahr with the claimed surface depth would have been obvious and this modification is within the capabilities of one of ordinary skill in the art. More particularly, where the general conditions of a claim are disclosed in the prior art, it is not inventive to discover the optimum or workable ranges by routine experimentation, *In re Aller* et al, 105 USPQ 233.

Ahr does not disclosed the claimed performance test characteristics. However, pages 36 and 40-42 of the present application sets forth materials capable of being

Art Unit: 3761

used in the dual-zoned web. Ahr teaches similar materials for the web as well as provides the method of making a wetlaid web, (col. 4, lines 27-55; col. 5, lines 63-65; col. 6, lines 40-55 and Figure 7). Thus, Ahr obviously includes a topsheet capable of having the claimed performance characteristics. When the structure recited in the reference is substantially identical to that of the claims of the instant invention, claimed properties or functions are presumed to be inherent (MPEP 2112-2112.01). A *prima facie* case of either anticipation or obviousness has been established when the reference discloses all the limitations of a claim except a property or function and the examiner can not determine whether or not the reference inherently possesses properties which anticipate or render obvious the claimed invention but has basis for shifting the burden of proof as in *In re Fitzgerald*, 619 F.2d 67, 70 205 USPQ 594, 596 (CCPA 1980).

5. Claim 91 is rejected under 35 U.S.C. 103(a) as being unpatentable over Ahr USPN 5763044 in view of Tanzer et al. USPN 5562645.

As to claim 91, Ahr does not disclose a meltblown material applied to the surface of the first outermost tissue web. Tanzer USPN 5562645 discloses a meltblown material as the topsheet material for the benefit of providing a topsheet to help isolate the wearer's skin from liquids held in absorbent structure (col. 5, lines 20-32). It would

Application/Control Number: 10/042,875 Page 5

Art Unit: 3761

have been obvious to one having ordinary skill in the art to modify the surface material of Ahr with the meltblown fibers taught in Tanzer for the benefits Tanzer discloses.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jacqueline F. Stephens whose telephone number is (571) 272-4937. The examiner can normally be reached on Monday-Friday 9:00-5:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Tanya Zalukaeva can be reached on (571) 272-1115. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only.
